

ADVANTAGES OF THE CABLE LADDER SYSTEM

Cable ladders are mainly used in various types of industrial facilities, where the most important aspects are the performance of cable routes:

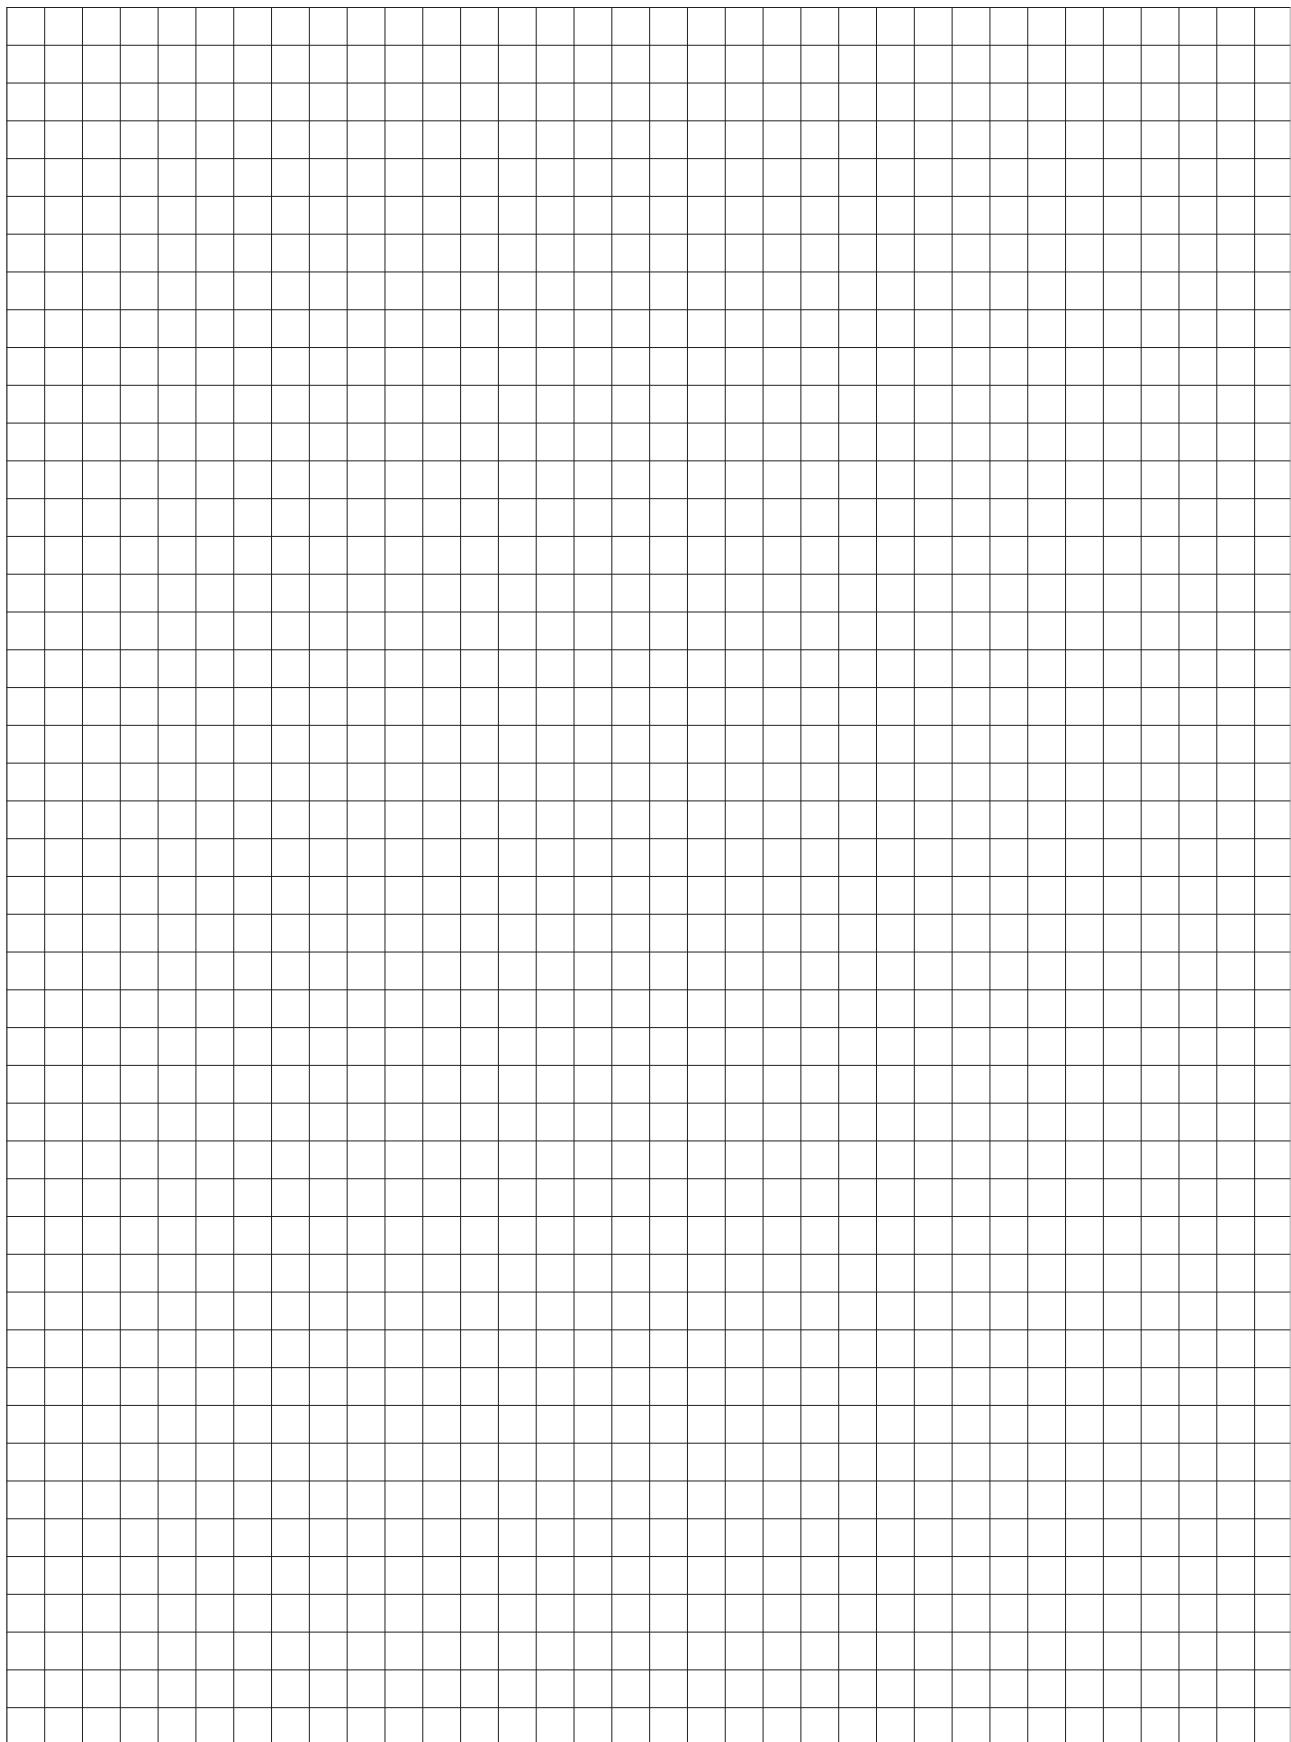

- Mechanical strength,
- High load-bearing capacity,
- Heat dissipation,
- Easy cable exits to the system,
- Ability to route heavy power cables with large cross sections, thanks to specially designed shaped elements (bends, tees, cross-overs, etc.) with large internal radii

Thanks to the high mechanical strength of cable ladders and a full range of brackets, they are used in the power industry for routing heavy cables with large cross sections. With the right material and cover, the ladders are suitable for both indoor and outdoor use in varying weather conditions.

1. CLICK type DF snap connection ladders - innovative snap connection without the need for bolting greatly speeds up the installation of the cable route - significant savings in the assembly time of the cable route, the connection of two ladders takes a few seconds.
2. The new dense, rectangular perforation of sides, connectors and fittings makes it possible to connect and install system components anywhere without drilling.
3. The system is also provided with extension tees, which make it easy to change direction and branch cable ladders anywhere.
4. New universal fasteners to make horizontal bends and bypasses and reductions quickly and inexpensively.
5. New slide-out connectors to make installation easier and faster without cutting ladders.
6. New vertical connectors for quick and inexpensive creation of vertical sections anywhere along the cable route.
7. The use of new rungs of 15x30 mm and 41x21 mm with a gap of 18 mm enables the use of two types of cable clips - UK... and UKZ....
8. Double riveted rungs (4 rivets per rung) significantly increase the rigidity of the ladder (the possibility of mounting horizontally with the rungs against the wall) and increase the resistance to shear loads (the possibility of vertical mounting, for example, in a cable duct).
9. Innovative method of hole-less riveting of rungs by forcing one material into another - a strong and rigid connection.
10. A complete system containing shaped elements, such as: elbows, tees, cross-overs, bends, reductions, covers, etc., allowing any formation of cable routes - this ensures speed and professionalism in installation, aesthetic qualities of the cable route as well as protection of cables from UV radiation, mechanical damage and dirt (covers).
11. Large radii of fittings ($R=420$ mm) for routing thick cables with minimum bending radii.
12. The cable ladder system ensures optimum heat dissipation from hot cables and facilitates keeping cables clean.
13. A wide range of dimensions: side height from 45 mm to 120 mm, width from 100 mm to 600 mm, sheet thickness from 1.0 mm to 2.0 mm - the ability to select the optimal ladder for different needs results in a significant reduction in the price of the cable route.
14. Ensured electrical continuity of all types of ladders DF, DU, DK and all dimensions of ladders confirmed by TÜV Rheinland and VDE certificates according to standards: PN-EN 61537:2007, DIN EN 61537:2007-9, BS-EN 61537:2007, EN 61537:2007.
15. Calculation modules on the website - ability to quickly and optimally select ladders based on load and duty.
16. BAKSCAD II - software provided to quickly design a cable route including support elements, with the ability to generate a bill of materials containing all the necessary components for the installation of the designed cable route.
17. It is possible to manufacture ladders in various coatings and materials: Sendzimir method galvanised steel according to PN-EN 10346:2015-09 (coating thickness approx. 19 µm), hot-dip galvanised steel according to PN-EN ISO 1461:2023-02 (up to 100 µm), Magnelis-coated steel (zinc-magnesium-aluminium coating) according to PN-EN 10346:2015-09, flake-galvanised steel according to PN-EN ISO 10683:2018-11, powder-coated galvanised steel, stainless steel 1.4301, 1.4044, 1.4571 (AISI grades: 304, 304L, 316, 316L, 316Ti and others), aluminium alloys, copper alloys - with such a wide range of materials and coatings, there are unlimited possibilities for use in any environment.
18. Fully automated production process of cable ladders and all system elements - thus ensuring high quality and repeatability of production with the precision of 0.1 mm
19. Technology and production quality at the highest level globally, thanks to the use of machinery from the best manufacturers on the market.
20. We produce from high quality materials, sheet metal, manufactured in Western European steel mills (Arcelor Mittal Eisenhüttenstadt, Arcelor Mittal Bremen, Arcelor Mittal Liege, Arcelor Mittal Gent) - high quality materials guarantee trouble-free and fast installation, long service life, uniform appearance of all products as well as conformity with safety standards in accordance with obtained certificates.

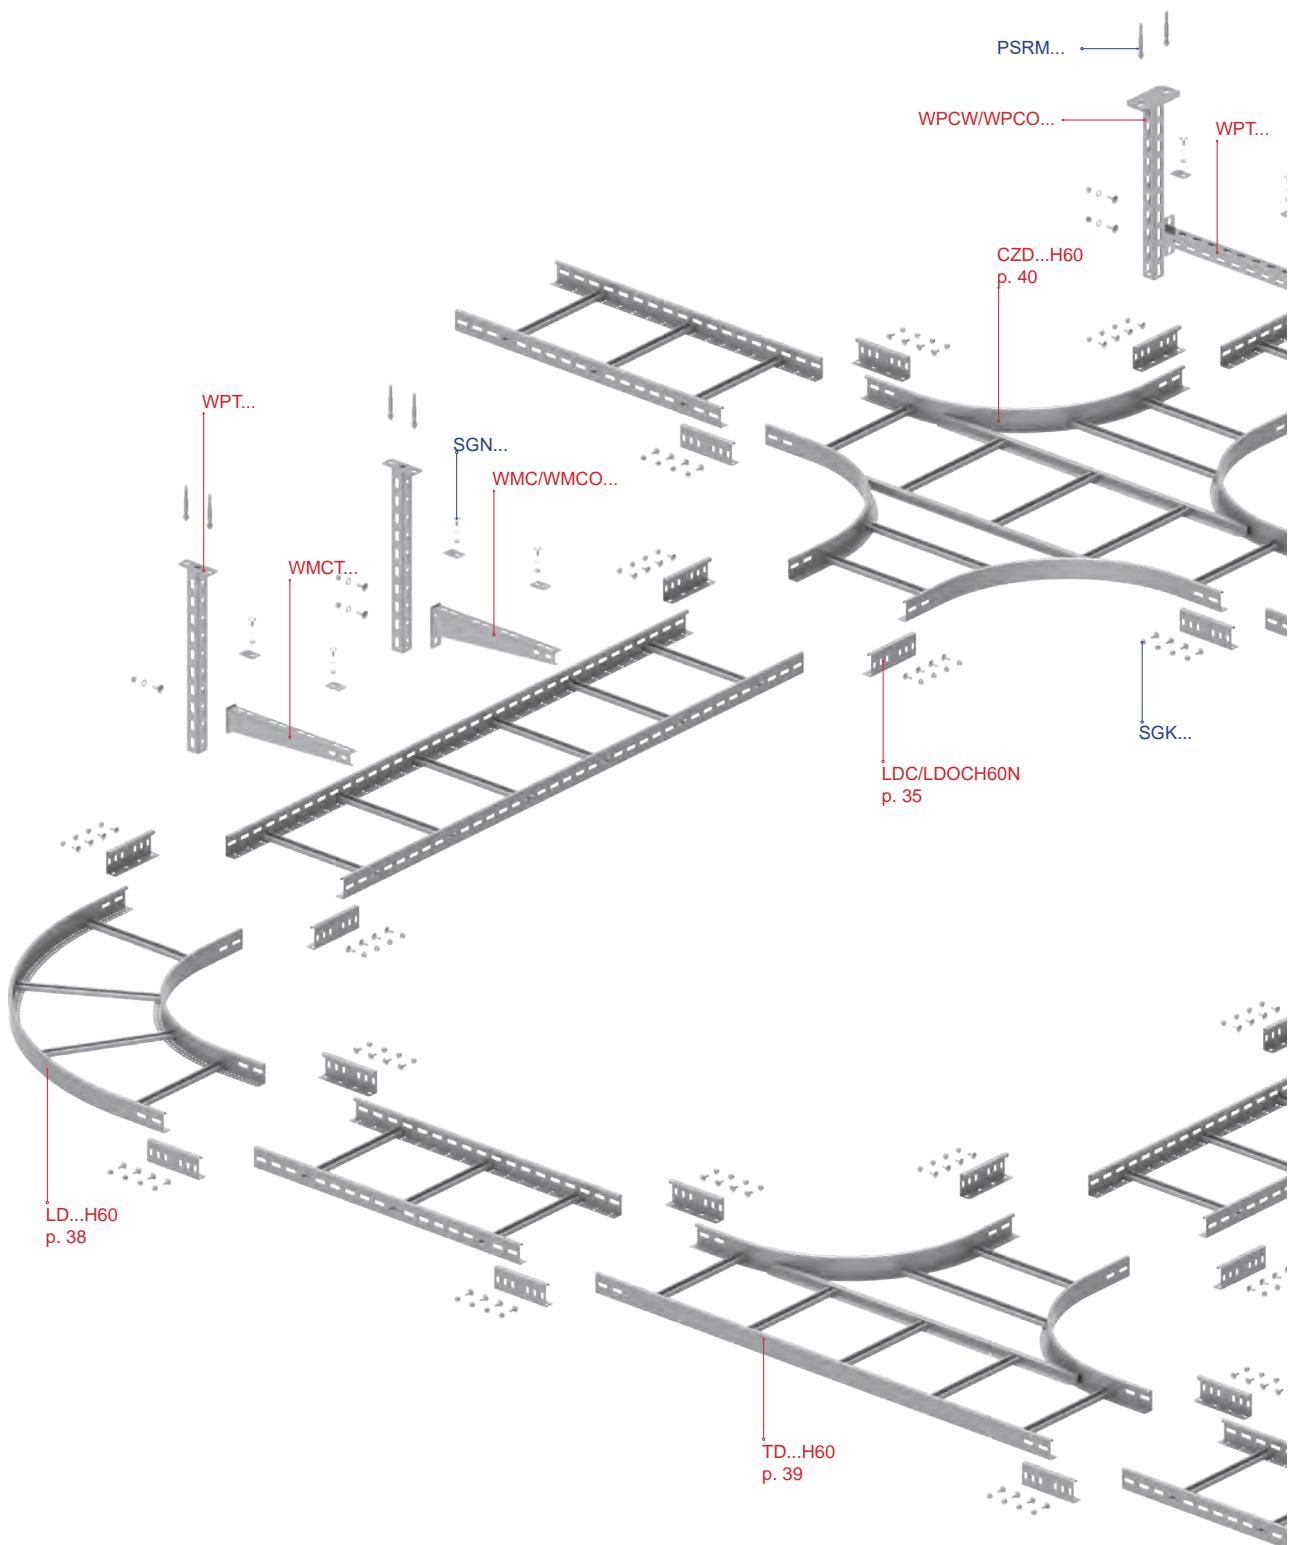

21. Design and manufacture of custom, non-standard ladders and even entire systems complete with fittings and support structures. Any length, width, height, perforation, thickness, type of material and use of any colour do not limit the possibilities in creating aesthetically pleasing and innovative solutions. We are flexible and open to customer needs.
22. All production located in one place and our own hot-dip galvanising plant, flake galvanising plant and powder coating plant - this allows us to fully control the entire production process, maintain the highest quality of the product and fulfil customer orders within expedited lead times.
23. We cooperate with leading cable manufacturers and jointly carry out E90 fire resistance tests according to DIN 4102-12 and seismic tests according to EUROCODE 8 and SIA 261 (seismic vibration resistance).
24. BAKS has been specialising in the production of cable routes for 36 years. Our extensive experience enables the design and manufacture of customised cable routes and support structures for use in all weather conditions.
25. For each large project, we dedicate at least 1 engineer, as technical support.
26. We organise free product training for designers, salespersons and fitters at BAKS production facility or at the customer's site at a convenient time.
27. We boast recommendations for many completed investments in Western Europe
28. We equip retail outlets with: sample boards, stands with catalogues and advertising materials, banners.
29. All the necessary certificates and approvals for ladder types DF, DU, DK:
 - TÜV Rheinland certification for mechanical strength
 - TÜV Rheinland and VDE certification for electrical continuity
 - National Technical Assessment, Certificate of Constancy of Performance and CNBOP-PIB (Scientific and Research Centre for Fire Protection – National Research Institute) Certificate of Approval confirming compliance with E90 system requirements according to DIN 4101-12
 - TÜV Rheinland certification confirming compliance of the production quality management system with the ISO 9001:2015 standard
 - TÜV Rheinland certification confirming compliance of the Environmental Management System with the ISO 14001:2015 standard
 - EC Declaration of Conformity
 - Test report on cable routes in seismic environment No. 5214'015'167 in accordance with SIA 261 and EUROCODE 8 standards, carried out at the Swiss material testing institute Empa

Connection at any point in the horizontal line of the cable route vertical exit.

Additional information:

- LPLS60 connector fits DK...and DU... ladders with heights of 45 – 60 mm.
- mounting with bolts SGM8x14 or SGKM8x14

Use:
Quick and easy connection of a new cable route to an existing one at any point.

Additional information:

- for mounting, we offer 4 sets of SGKM8x14 or SGM8x14 bolts
- stable and fast mounting anywhere on the ladder without drilling holes

Use:

Routing a cable route.

Additional information:

- ladder with rungs suitable for mounting UK/UKO... and UKP... cable clamps
- option E - only for sections up to 3 m - design with less frequent perforation in the bottom of the ladder side
- on large order ladders available in lengths of 2 m and widths of 150 and 250 mm
- in the case of mounting ladders horizontally – rungs to the wall, it is recommended to use ladders with rungs double riveted to the board

**Use:**

The LDR connector makes it easier and faster to install cable ladders. The missing section of the route length can be extended by installing the LDR connector and extending it, thus avoiding the cutting of ladders. After determining the appropriate spacing, we secure the connector with a bolt connection (such as SGKM8x14).

Additional information:

- fast and secure connection
- speeds up the mounting entire cable route
- avoidance of mechanical cutting of the cable route
- infinite length adjustment
- possibility to reinforce the connector by mounting the rung in the bottom with a screws set SGKM6x12

Material thickness = 2.0 mm					
LDCH100N	411001	105	0.37	10	LKDCH100N

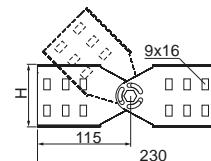

Use:

Connecting cable routes

Additional information:

- use 8 sets of SGKM8x14 or SGM8x14 bolts for mounting

Articulated connector	LG...H100		mat.: S	option: F, E, L	
code	catalogue number	dimension H [mm]	weight 1 pc. [kg]	quantity per package [pcs.]	substitute

Material thickness = 3.0 mm					
LGTH100N	411302	107	0.51	10	LGCH100N

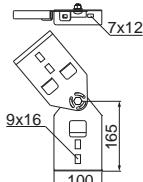

Use:

Connecting cable ladders routed at different angles. Full range angle adjustment with locking mechanism.

Additional information:

- for mounting, we offer 8 sets of SGKM8x14 or SGM8x14 bolts

Articulated Connector - Attachable	LDD...H100		mat.: S	option: F, E, L	
code	catalogue number	weight 1 pc. [kg]	quantity per package [pcs.]	substitute

Material thickness = 3.0 mm					
LDDTH100N	411202	0.95	10	LDDCH100N	

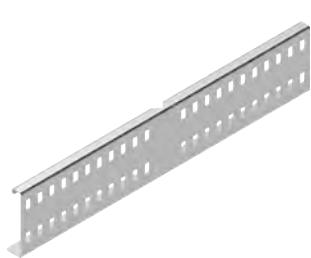

Use:

Connecting elements of a cable route routed at different angles. Angle adjustment from 0-90°. Ability to form a two-level route.

Additional information:

- use 4 sets of SGKM8x14 bolts for mounting when bolting to the side of the ladder board

Angle Connector	LKD...H100		mat.: S	option: F, E, L	
code	catalogue number	dimension H [mm]	weight 1 pc. [kg]	quantity per package [pcs.]	substitute

Material thickness = 2.0 mm					
LKDCH100N	411101	105	0.65	20	LKDPH100

Use:

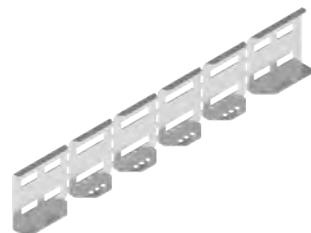

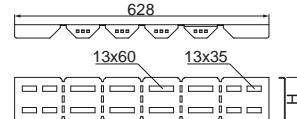

Connecting cable ladders routed at different angles

Additional information:

- the new dense perforation used in the connector guarantees the bolt connection of two ladders cut at any point both at an angle and straight without additional drilling
- for mounting, we offer 8 sets of SGKM8x14 or SGM8x14 bolts

Universal connector	LLUS...H100	mat.: S	option: F, E, L

Material thickness = 2.0 mm					
LLUSH100	431100	105	1.16	10	LLUSPH100

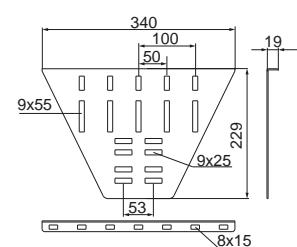

Use:
Forming reducers and bends.

Additional information:

- use SGKM8x16 bolts and PW8 washers for mounting
- to reinforce the formed fitting, it is recommended to use the SCP rung...

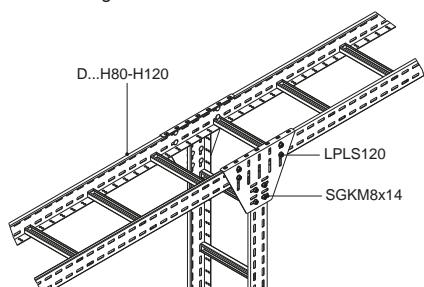

Vertical Connector	LPLS120	mat.: S	option: F, E, L		
code	catalogue number	weight 1 pc. [kg]	quantity per package [pcs.]		
Material thickness = 2.0 mm					
LPLS120	405812	0.82	2		

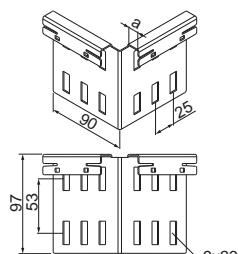

Use:
Connection at any point in the horizontal line of the cable route vertical exit.

Additional information:

- LPLS120 connector fits DK...and DU... ladders with heights of 80 – 120 mm.
- mounting with bolts SGKM8x14 or SGKM8x14

Angle coupler - bendable	LKU...H100	mat.: S	option: F, E, L		
code	catalogue number	dimension a/H [mm]	weight 1 pc. [kg]	quantity per package [pcs.]	substitute

Material thickness = 2.0 mm					
LKUCH100	405719	13/97	0.31	10	LKUPH100

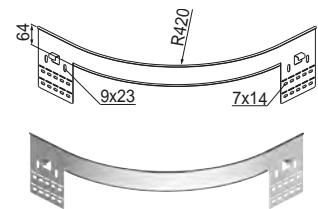

Use:
Quick and easy connection of a new cable route to an existing one at any point.

Additional information:

- for mounting, we offer 8 sets of SGKM8x14 or SGM8x14 bolts
- stable and fast mounting anywhere on the ladder without drilling holes

Use:

Routing a cable route.

Additional information:

- ladder with rungs suitable for mounting UK/UKO... and UKP... cable clamps
- option E - only for sections up to 3 m - design with less frequent perforation in the bottom of the ladder side
- on large order ladders available in lengths of 2 m and widths of 150 and 250 mm
- in the case of mounting ladders horizontally - rungs to the wall, it is recommended to use ladders with rungs double riveted to the board

Use:

Fixing electrical cables directly on the wall vertically or horizontally and on the ceiling with UK/UKO..., UKP..., UKZ... or UKZP... cable clamps

For hanging lamps and as a structural element for mounting ladders and cable trays. As a support element for wall brackets: WWSR..., WW..., WWS/WWSO..., WU/WUO..., WWSN..., WS..., WZS..., WSZN... (for th. \geq 2 mm), WTL..., WWT..., WPL..., WPT...

Additional information:

- large slot in the open section of the channel makes it easier to install the UK/UKO... and UKZ... cable clamps
- easy mounting cables on the wall and ceiling
- easy bypassing of obstacles on the wall and ceiling when laying a cable route
- use SGKM10x20 or SGM10x20 bolts to join the channel with the connector

Protective cap	NOW40x22	mat.: PE

**Use:**

Protection of the fitter from injury from steel edges, improving visual aspect.

Additional information:

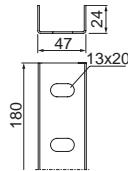

- covers the edges of the wall brackets, protecting fitters from injury
- thanks to a new secure lock, the caps always stay in place
- provide a visually pleasing end to a channel or wall bracket
